Case Study

Chase Farm

Showcasing Product Longevity

Project Brief

To refurbish administrative, meeting and patient areas, assisting with space planning and design support where required. Waiting areas were zoned for easier navigation and space recognition.

All items were selected to meet accessibility, medial and hygiene requirements in line with the NHS furniture framework and relevant current legislation.

Due to the physical delivery locations in 24/7 use, installation of new furniture items required JPA Project Team co-ordination removal for recycling of existing items – with zero to landfill.

Key Outcome

Works were managed to budget and timescale through regular liaison with the RFH Project Manager, made easier by JPA's local presence.

Delivery and installation was phased over several days during the quietest period of occupancy for least disruption to staff, patients and visitors. JPA's in-house logistics enabled tailored deliveries and accommodated unexpected changes as they had control over the whole process.

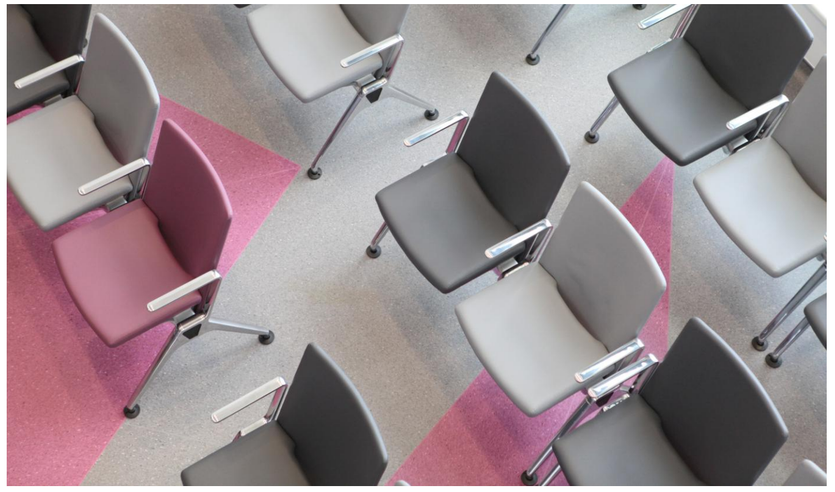

JPA provided a 10 year supported warranty on furniture supplied to optimize investment through long-term value and reduced waste. JPA additionally provide furniture maintenance services after warranty has expired and take-back services when furniture is no longer required.

It is anticipated that all items supplied will have a 20year plus lifecycle which not only extends procurement cycles, but also reduces carbon, waste and harmful impacts on our planet through over-manufacture.
